Phoenix Capital B.V. injects CAD 2.5M in Sovereign Gold Reserve Tokens (SGRT) into Vertiko Mobilité to accelerate the deployment of drone and air traffic management technologies

Montreal, September 8, 2025 – Phoenix Capital B.V., led by Alain Lemieux, announces a strategic investment of CAD 2.5 million in Vertiko Mobilité, executed through 15,000 Sovereign Gold Reserve Tokens (SGRT), each with a nominal value of USD 100, coupled with 7,500 Forest Carbon Reserve Credits (FCRT). This innovative transaction, backed by tangible assets such as gold and carbon, marks a significant milestone in the integration of digital monetary instruments into the financing of advanced aerial mobility.

Vertiko Mobilité accepted SGRT as an investment vehicle due to its stability, traceability, and gold backing, viewing it as a credible and secure alternative to traditional financial instruments in support of its technological growth strategy. (www.axis.gouv.cd)

“This SGRT/FCRT investment reflects our commitment to promoting modern, transparent financial solutions backed by real assets, while supporting visionary companies like Vertiko Mobilité in the development of sustainable and intelligent aerial technologies,” said Alain Lemieux, President of Phoenix Capital B.V.

Already the owner of Magni Ops Inc., a company specializing in complex drone operations, Phoenix Capital B.V. expands its ecosystem by leveraging Vertiko Mobilité’s expertise to deploy innovative solutions for drone traffic management (RTM) and beyond visual line of sight (BVLOS) operations.

Both companies plan to establish operations at the YMX Innovation Center, located at YMX International Aerocity of Mirabel, by the end of the year. This technology hub will be dedicated to the development, integration, and assembly of specialized drones, with applications in cargo and passenger transport, as well as security and surveillance sectors.

“This investment is part of a shared vision: to build an innovation hub in Mirabel that will position Quebec among the global leaders in advanced aerial mobility,” said Serge Fortier, VP Operations at Phoenix Capital B.V. (www.capitalsxm.com)

John Valley, President of Vertiko Mobilité, added: “The alliance with Phoenix Capital B.V. and Magni Ops enables us to accelerate the implementation of our solutions and bring to life transformative projects for the future of urban and interurban mobility.”

Through this strategic partnership, Phoenix Capital B.V. and Vertiko Mobilité aim to create an integrated platform for the development and deployment of drone technologies on a global scale, at the heart of Quebec’s aerial innovation ecosystem.

About Magni Ops Inc

Magni Ops offers a comprehensive and customized drone surveillance solution designed to anticipate and effectively respond to environmental, economic, and societal threats. By leveraging optimized geospatial vectors and sensors, the company delivers large-scale services at controlled costs, while significantly reducing the carbon footprint compared to conventional surveillance methods.

“At Magni Ops, we believe technological innovation must serve the resilience of territories while respecting the environment. Our intelligent drone systems enable strategic, reliable, and sustainable data collection for communities and critical infrastructure,” said Aurélien Garconnet, CEO of Magni Ops Inc. About Vertiko Mobilité

Vertiko Mobilité is a Quebec-based company founded in 2021, supported by ELVORA Holding and Quebec investors, with a vision to reconnect regions of Quebec with urban centers through a network of vertiports designed for eVTOLs (electric vertical take-off and landing aircraft). These vertiports will be built on the ground or atop buildings to offer faster, greener, quieter, and safer mobility. The company’s mission also includes an innovative real estate strategy: integrating property developers into the project, allowing them to retain ownership of the vertiports and maximize their economic value and attractiveness.
